

Hey! Is your increased aperture size increasing your vacuum window thickness?
That thick window contributing half your instrument loading budget?

Try Thin Laminate Windows Today!

Thin laminate windows use new **Composite Plastic Technology** to generate windows as thin as 1 mm!

Already deployed on
receivers at South Pole!

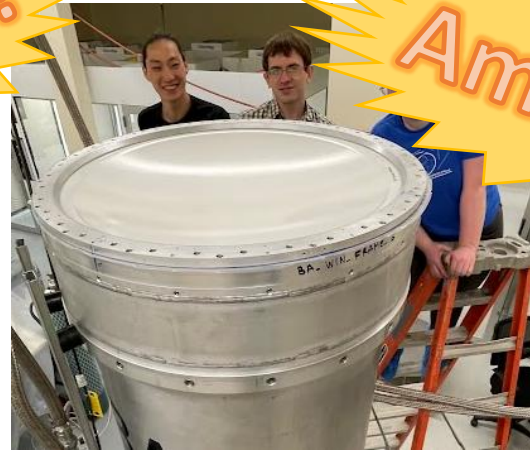

Made to order in a
Harvard Autoclave!

WOW!

Thin laminate windows:

- Decrease white noise!
 - As much as 2x!
 - Depending on frequency and original thickness of PE window
- Can act as an anti-reflection layer!
- 3x stronger than other polyethylenes!

Amazing!
